

Hose assembly lengths corrugated metal hose

International Standard ISO 10380 states that a braided corrugated hose assembly shall be of such a length that is at least one complete revolution of braid along the length of hose.

On SITCOFLEX braided corrugated assemblies this length is :-

NB (mm)	Required Min. live hose Lengths
6	40
8	50
10	50
12	50
15	62
19	63
25	70
32	120
38	120
50	144
63	195
75	213
100	245
125	330
150	395
200	530
250	580

Note: This is the live length of the assembly (i.e. between the braid collars), not the overall length.

If this minimum live hose length is not met, the assembly will be unable to meet the performance specifications in the hose product data sheets. This may result in premature failure and void product warranties.
